SKILLS

LEADERSHIP
Technical strategy,
architecture decisions,
code review, mentoring,
roadmap planning

BLOCKCHAIN
Solidity, EVM, DeFi,
smart contract security,
Hardhat, Foundry,
Ethers.js

BACKEND
Go, Python, gRPC,
FastAPI, PostgreSQL,
Redis, RabbitMQ

INFRASTRUCTURE
Docker, Kubernetes,
Helm, ArgoCD, CI/CD,
Linux

EDUCATION

BSTU "VOENMEKH"
St. Petersburg
Computer Science
2020 — 2023

ABOUT

Tech Lead with 5 years in Web3 and fintech. Led cross-functional teams, owned technical strategy and architecture across 7+ products (prediction markets, omnichain yield aggregator, DEX, staking protocol). Translate product roadmaps into engineering plans. Hands-on in smart contracts and backend while managing delivery.

EXPERIENCE

Tech Lead → Engineering Lead 09.2024 — present
Nox Labs / DeFi, Web3

Predictfully.app Prediction Market · 2.5k users
— Led a cross-functional team (frontend, backend, smart contracts). Owned technical strategy, conducted code reviews, mentored developers.
— Coordinated with product manager: translated roadmap into engineering plans, decomposed features into sprints, managed priorities and timelines.
— Designed full system architecture: microservices backend (Go), FPMM smart contracts (Solidity), on-chain event processing, indexing.

Maat Omnichain Meta Yield Aggregator · \$300k TVL
— Omnichain yield aggregator across EVM chains. Designed architecture, smart contracts and cross-chain integration.

Terahash Stablecoin / Staking Protocol
— Built staking protocol and token contracts using diamond pattern (EIP-2535) and upgradeable proxy architecture for external client.

Pholend Lending Protocol (Aave V2 fork)
— Developed custom incentives control module. Built liquidator bot and sybil detection system for airdrop-farming prevention.

Also: 20+ Solidity contracts to mainnet across Ethereum, Arbitrum, Optimism, Base. Pre-audits, gas optimization, on-chain event processing, Subsquid indexing.

Backend Engineer 05.2021 — 09.2024
Unistory / Software Development

xAssets Decentralized Exchange
— Developed and maintained backend: Python (FastAPI, SQLAlchemy), Go, REST APIs, external integrations, Helm charts for ArgoCD.
— Optimized database queries, designed async inter-service messaging via RabbitMQ, built background workers with retry logic.
— Standardized Docker containerization and CI/CD templates for the team (~20 developers).
