SKILLS

LEADERSHIP
Tech lead, code review,
architecture decisions,
mentoring, roadmap
to engineering plans

SMART CONTRACTS
Solidity, ERC-20, ERC-721,
ERC-1155, proxy patterns,
diamond (EIP-2535),
upgradeable contracts

DEFI / WEB3
AMM, FPMM, staking,
vesting, multisig,
wallet/auth flows,
indexers (Subsquid)

TOOLS
Hardhat, Foundry (fuzz,
coverage), Ethers.js

CHAINS
Ethereum, Arbitrum,
Optimism, Base

BACKEND
Go (echo, gRPC,
goroutines, channels),
Python (asyncio,
FastAPI, SQLAlchemy)

DATABASES
PostgreSQL, MongoDB,
MySQL, Redis

INFRASTRUCTURE
Docker, Kubernetes,
Helm, ArgoCD, CI/CD,
Git, Linux

EDUCATION

BSTU "VOENMEKH"
St. Petersburg
Computer Science
2020 — 2023

ABOUT

Tech Lead / Web3 Engineer with 3+ years of production experience in DeFi and fintech. Led development of a prediction market platform (predictfully.app): architecture decisions, code review, mentoring. Deployed 20+ smart contracts to mainnet using proxy and diamond patterns. Translate product roadmaps into engineering plans. Hands-on in key modules while managing delivery.

EXPERIENCE — 3+ YEARS

Tech Lead / Smart Contract Engineer

09.2024 — present

Nox Labs · Remote

Solidity · Hardhat · Foundry · Go · gRPC · PostgreSQL · Redis · RabbitMQ · Docker · Subsquid

- Led development of predictfully.app (prediction market): owned technical strategy, made architecture decisions, conducted code reviews, mentored junior developers and interns.
- Translated product roadmap into engineering plans: decomposed features into sprints, coordinated with product lead on priorities and timelines.
- Designed backend architecture: 10+ Go microservices (Clean Architecture), gRPC inter-service communication, async messaging via RabbitMQ, external API integrations.
- Deployed 20+ Solidity contracts to mainnet: custom FPMM markets (Gnosis-based) with Vault, Router, share management, multisig, whitelist and platform token.
- Built staking protocol contracts for Terahash (external client): whitelist, token, diamond pattern (EIP-2535); nearly all contracts via proxy (upgradeable) patterns.
- Contributed to Pholend (Aave V2 fork): custom incentives control module for protocol-specific reward distribution.
- Conducted pre-audits: gas optimization, reentrancy checks, access control, business logic review.
- Built on-chain event processing across EVM chains (Ethereum, Arbitrum, Optimism, Base) with nonce management, gas estimation and Subsquid indexing.

Backend Engineer

05.2022 — 09.2024

Unistory · Remote

Python · FastAPI · SQLAlchemy · Go · PostgreSQL · MySQL · Redis · RabbitMQ · Docker · Helm · ArgoCD
Product team, ~20 developers, full-time.

- Developed backend for xAssets (decentralized exchange): Python (FastAPI, SQLAlchemy, asyncio), REST APIs, OAuth/webhook integrations, Helm charts for ArgoCD.
- Optimized PostgreSQL/MySQL queries: query plan analysis, composite indexes, JOIN rewrites; reduced hot endpoint latency via Redis caching.
- Designed async inter-service messaging via RabbitMQ, reducing coupling and enabling independent deployments.
- Built background workers with retry logic and DLQ for data processing pipelines.
- Standardized Docker containerization and CI/CD templates: health-checks, structured logging, graceful degradation.
